

Partior's decentralized FX PvP solution empowers market participants to achieve real-time atomic settlement for FX trades, eliminating settlement risk and optimising liquidity across advanced economy ("AE"), and emerging markets and developing economy ("EMDE") currencies.

Partior's 24x7 always-on atomic settlement, coupled with programmability of smart contracts, enables settlement to be precisely timed.

This technology enables innovative money market instruments such as intraday FX Swaps and time-based settlement, enhancing liquidity management and reduces the cost of pre-funding for market participants.

THE CHALLENGE

- To eliminate settlement risk and the need for maintaining settlement margins.
- 2. To reduce operational overheads and enable workflow automation.
- High liquidity and funding costs driven by the lack of access to intraday liquidity on a secured basis.

BENEFITS FOR NETWORK PARTICIPANTS

- 1. Reduces counterparty risk with atomic state updates
- 2. 24x7 immediate settlement and delivery of currencies
- Eliminates the need to maintain FX settlement margins for non-PvP currencies
- 4. Customisable **netting** capabilities across currencies
- 5. Enhanced Liquidity with new financial instruments such as intraday FX swaps to access intra-day liquidity on a secured basis and provide options for yield enhancement

BENEFITS FOR END CUSTOMERS

- 1. Faster and more reliable settlement
- 2. Complete transparency throughout the transaction lifecycle
- 3. Access to broader network and currencies
